Launch of IP camera systems integration site

Today deMaher launched a new website explaining its integration of IP Network Cameras with Video Surveillance And Recording Over Network. They are the Leader in IP Camera Systems Technology Integration.

With their integrated Linux system and integrated software they can Integrate Cameras Into Process. Using HMI (touch screens) that utilize the camera image to superimpose generated data onto

the screen. Then use these figures to trigger automated events or actions. They are modifying off the shelf products and utilizing their in house services to create outstanding solutions for industry.

Management Of Information To Implement Actions

Integrate cameras to do all the work for you. Not only can our systems monitor what is happening they can also take action, solve, show the problem or situation via vision, sound and data anywhere in the world in real time. Share your view or data with anyone at any time via IP even if they are on the other side of the world.

Manipulation Of Usable Data

We can manipulate any form of industrial data for machine control. Our systems can talk to any industrial protocol or language.

Solutions For Industry

View the process from a safe and secure environment while seeing data and images collected, recorded and acted upon with our in house designed solutions.

Technical Understanding

deMaher is a company that have a strong understanding of heavy industrial automation and integrate smart solutions.

Solutions

View the process from a safe and secure environment while seeing data and images collected, recorded and acted upon with our in house designed solutions.

With deMaher cameras solutions we can place cameras on moving vehicles. Due to no moving parts on the cameras they will withstand abnormal amounts of vibration or adverse weather conditions. Applications for boats, trains, planes, taxis, work trucks, mining, bitumen tankers etc

When you think of cameras you think of security. Our base as industrial integration on IP Cameras into process control and monitoring bring security into play. Have a image for process say looking over your truck weight bridge one we can imbedded truck loads onto the screen etc but the owner can also use the image for security.
